

850 nm 660 nm Luz LED Dispositivo antienvjecimiento Therapy Wand Luz roja LED

Aleación de aluminio con revestimiento de Color negro.

Base : E 27

Enfriamiento automático con protector de molde

Rendimiento constante para chips infrarrojos IR

Chip de 3W por pc.

9 piezas de infrarrojos: 850 nm

9 piezas de luz roja: 660 nm.

Detalles de parámetros:

Nombre	terapia infrarroja con luz led
Color	Negro luz LED . (luminaria en blanco y negro)
Especificación	54W con cable de enchufe y kits de accesorios
Material	Aluminio
chips LED IR	850nm660nm 18PCS 3W/PC
Intensidad	100 mw/cm2
Voltaje	100-240 VCA 50-60 HZ
Función	Equilibra la vitalidad celular/situmuna la circulación sanguínea, antienvjecimiento facial.
Característica	Ahorro de energía Bajo consumo

54W

Powerful
Red LED Light

Infrared light enhance cell vitality

Under infrared irradiation, capillary dilation, metabolism and cell viability and regeneration ability were improved

54 watt infrared light source

Because the distribution of heat on the irradiation area is more uniform, it covers a wider area, which can effectively relieve pain

Perfect Wavelength Combination for Light Therapy

PCS high-power deep red 660nm and 9PCS high-power deep red 850nm(looks dark, but more efficient) can penetrate deeper into muscles and body tissues, so as to more effectively relieve pain

Stimulate the circulation of blood

The infrared light penetrates into the deep layer of the skin, promotes the thermal cycle, increases the phagocytosis of white blood cells, and improves the immunity of the body
